# ClassifierCV

## mod classifier\_cv

Definition for ClassifierCV.

class ClassifierCV

Bases: BaseAutoCV, ClassifierMixin, ExplainerMixIn

Defines an auto classification tree, based on the bayesian optimization base class.

```
attr scorer property
```

```
scorer
```

Returns correct scorer to use when scoring with RegressionCV.

```
meth __init__
```

```
__init__(metric, cv, n_trials, timeout, config)
```

Constructor for ClassifierCV.

#### Parameters:

Name	Туре	Description	Default
metric	AcceptableClassifier	Loss metric to use as base for estimation process.	required
CV	BaseCrossValidator	Splitter object to use when estimating the model.	required
n_trials	NonNegativeInt	Number of optimization trials to use when finding a model.	required
timeout	NonNegativeInt	Timeout in seconds to stop the optimization.	required
config	ClassifierCVConfig	Configuration to use when fitting the model.	required

```

```

#### meth predict\_proba

```
predict_proba(X)
```

Returns model probability predictions.

### class ClassifierCVConfig

Available config to use when fitting a classification model.

interactions: list of lists containing permitted relationships in data. parameters: dictionary with distribution bounds for each hyperparameter to search on during optimization. n\_jobs: Number of jobs to use when fitting the model. sampler: imblearn sampler to use when fitting models.

```
~
```

```
@dataclass(frozen=True, config={"arbitrary_types_allowed": True})
34
     class ClassifierCVConfig:
35
36
37
         Available config to use when fitting a classification model.
38
         monotone_constraints: dictionary containing monotonicity direction allowed
39
40
    for each
41
            variable. 0 means no monotonicity, 1 means increasing and -1 means
42
     decreasing
43
             monotonicity.
