RegressionCV

mod regression_cv

Definition for RegressionCV.

class RegressionCV

Bases: BaseAutoCV, RegressorMixin, ExplainerMixIn

Defines an auto regression tree, based on the bayesian optimization base class.

```
attr scorer property
```

```
scorer
```

Returns correct scorer to use when scoring with RegressionCV.

```
meth __init__
```

```
__init__(metric, cv, n_trials, timeout, config)
```

Constructor for RegressionCV.

Parameters:

Name	Туре	Description	Default
metric	AcceptableRegression	Loss metric to use as base for the estimation process.	required
cv	BaseCrossValidator	Splitter object to use when estimating the model.	required
n_trials	NonNegativeInt	Number of optimization trials to use when finding a model.	required
timeout	NonNegativeInt	Timeout in seconds to stop the optimization.	required
config	RegressionCVConfig	Configuration to use when fitting the model.	required

```

meth predict

```
predict(X)
```

Returns model predictions.

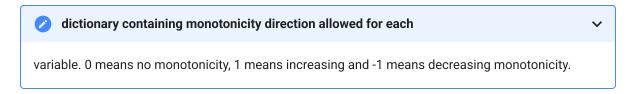

meth predict_proba

```
predict_proba(X)
```

Returns model probability predictions.

class RegressionCVConfig

Available config to use when fitting a regression model.

interactions: list of lists containing permitted relationships in data. n_jobs: Number of jobs to use when fitting the model. parameters: dictionary with distribution bounds for each hyperparameter to search on during optimization. return_train_score: whether to return the train score when fitting the model. quantile_alpha: Quantile alpha to use when fitting the model, if fitting a quantile model.
